Introduction:

1. The workshop aims to share Taiwan’s experiences in the field of health care technology to:
   - Improve the quality and efficiency of medical services and introduce the hierarchical medical system.
   - Promote the concept of smart health care and enhance the economic benefits of
medical service.

2. To assist partner countries in gaining comprehensive knowledge in application and management of health care technology, the workshop focuses mainly on strategic and practical methods.

**Agenda:**

- **Indoor lectures:** Various topics on the promotion and management of health care technology such as the development of medical technology in Taiwan, application of smart health care in modern surgery, planning of database and e-health facility, building and setting-up mobile health services, Big Data application and privacy protection strategies.

- **Field trips:** Visits to several hospitals that have installed e-health systems and provide telecare service, and medical equipment companies.

- **Group presentations:** Participants present their accomplishments after having a common understanding on the promotion and management of medical technology through group discussion.
