# Emerging Stronger after COVID-19:

**Science, Technology, and  
Innovation for Sustainable  
Development**

Panelist

## Patrick England

**Knowledge Management And Innovation Support Officer,  
WSSCC / Sanitation and Hygiene Fund (SHF)**

**Webinar hosted by**

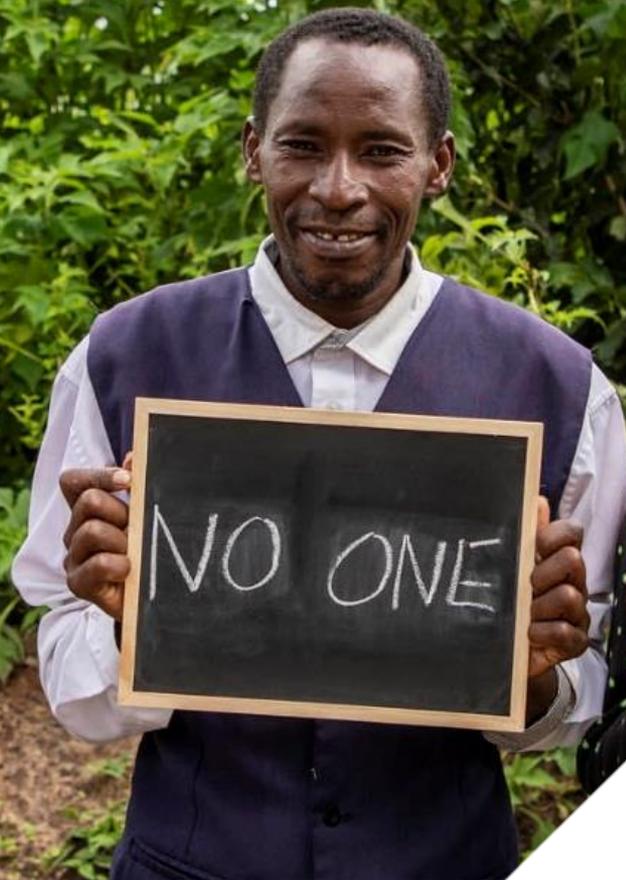

International Cooperation and  
Development Fund

Center for Sustainable Development  
EARTH INSTITUTE | COLUMBIA UNIVERSITY

# STI in WASH for Health Emergencies

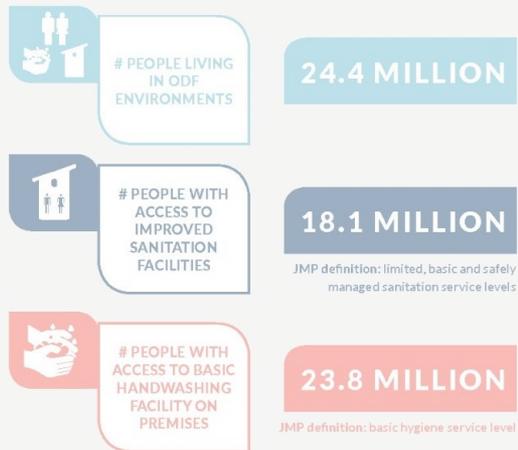

## *A Case Study on Nepal*

# WSSCC is transforming into an efficient, scalable and global Fund

## WSSCC

Building upon the results from the Global Sanitation Fund

## Fund for sanitation, hygiene and MHH

Figures as of July 2019. Source: GSF Executing Agency 2018 Annual Report.

- **Filling a void** in the international response to the sanitation, hygiene and menstrual health and hygiene gap
- Giving sanitation, hygiene and menstrual health and hygiene a mechanism to take its **response to a new level**

# Billions of people globally are without access to sanitation, hygiene and menstrual health

>1 in 2

**Persons globally** live without access to safely managed **sanitation**

1 in 5

**Health care facilities** globally has no **sanitation service**

1 in 3

**Persons globally** lack basic **handwashing facilities at home**

70%

**Of healthcare workers** do not routinely **practice hand hygiene**

1 in 3

**Children** worldwide lack **basic sanitation services at their school**

**Hundreds of millions**

**Of menstruators** lack the means to ensure their **menstrual health and hygiene**

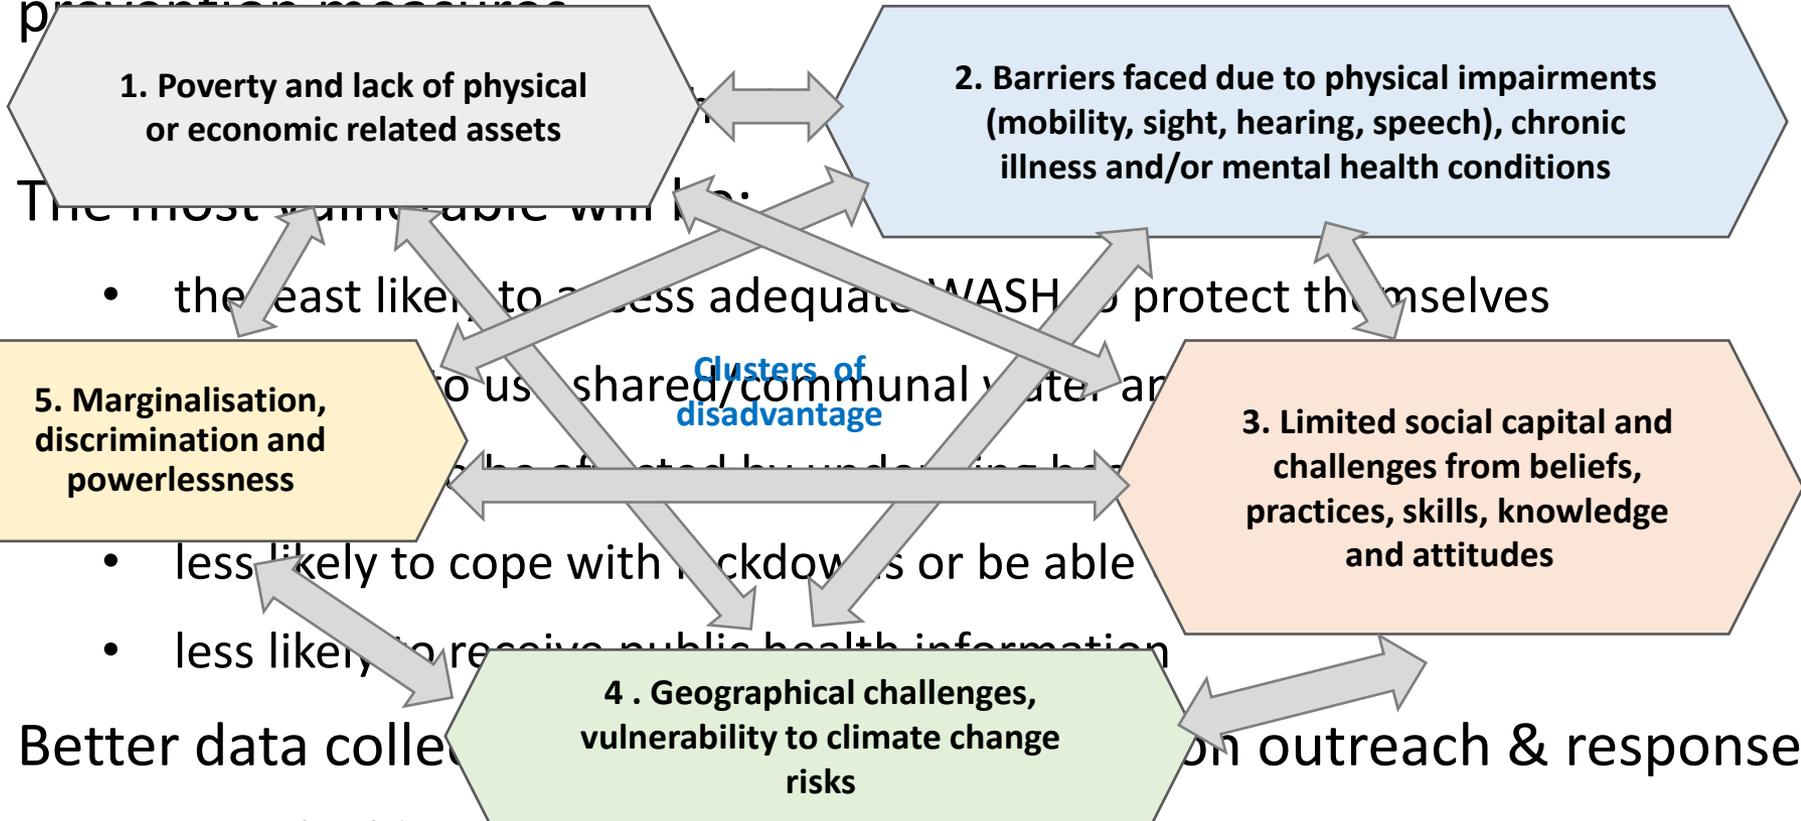

**There is already a global health crisis due to preventable disease in many settlements around the world due to poor water, sanitation and hygiene**

# WASH, COVID-19, and vulnerability

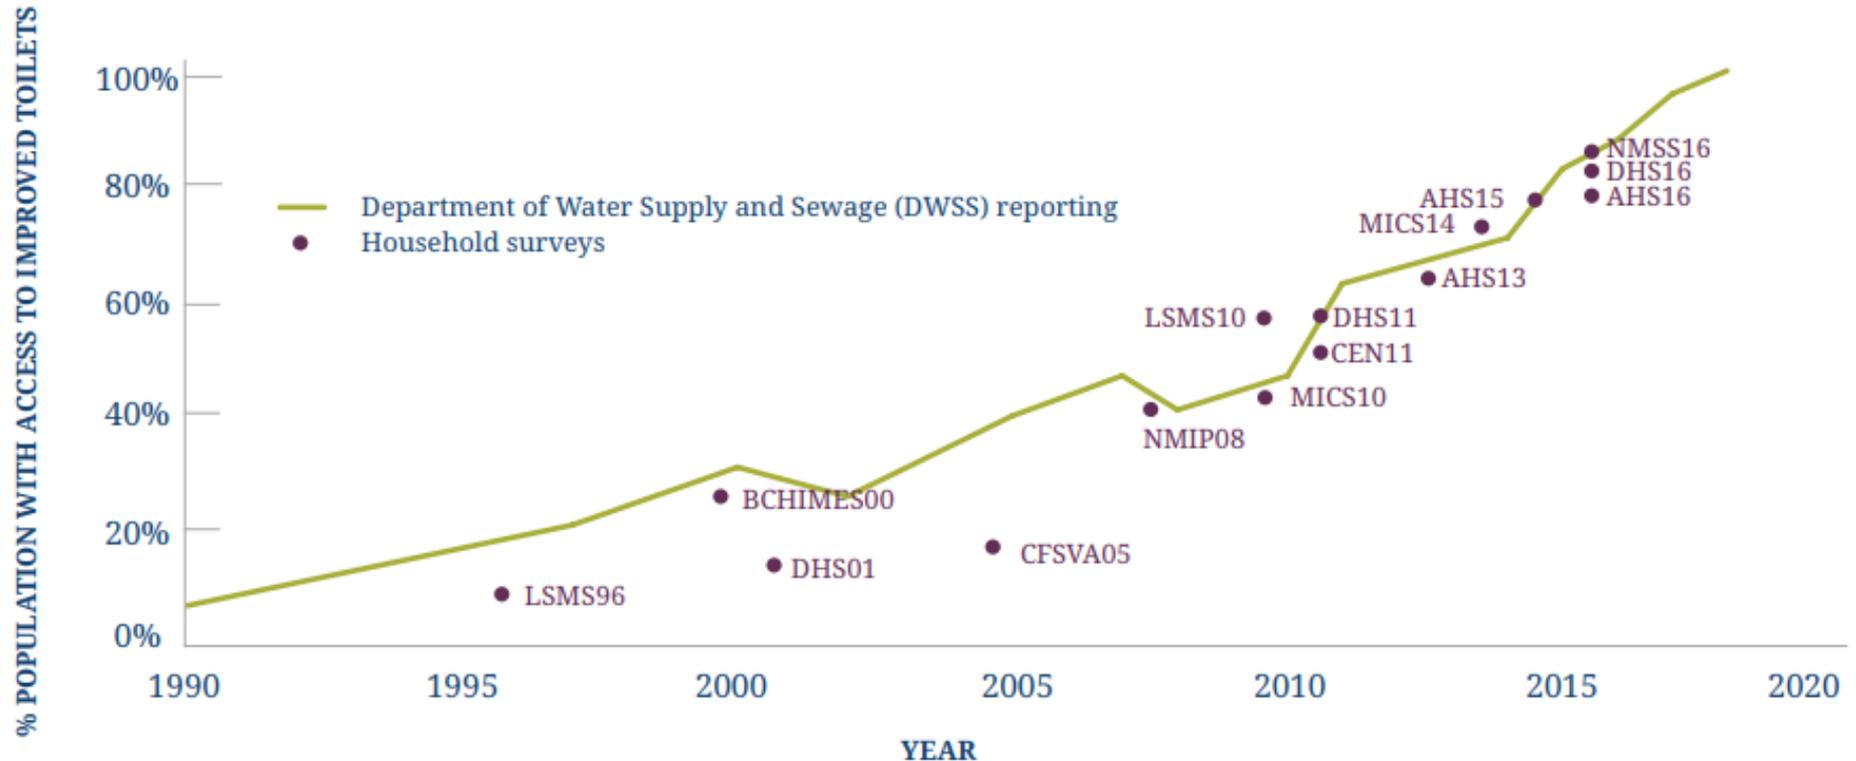

- Handwashing with soap is one of the most essential COVID-19 prevention measures

- The most vulnerable will be:
  - the least likely to access adequate WASH to protect themselves
  - less likely to use shared/communal water and be affected by water quality
  - less likely to cope with lockdowns or be able to
  - less likely to receive public health information
- Better data collection on outreach & response
  - Must build on existing systems
  - Must have communities take the lead

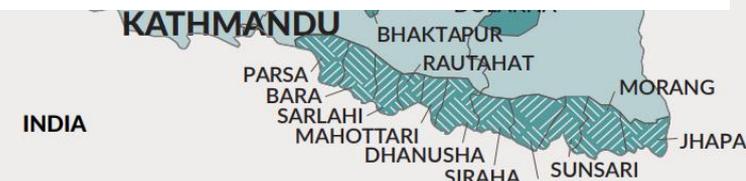

# Case study: Nepal COVID-19 monitoring

**FIGURE 1** Nepal Sanitation Status: 1990 - 2019

Government of Nepal, December 2018. Adapted by Mark Ellery

3. Mobilization of broad cross section of community groups

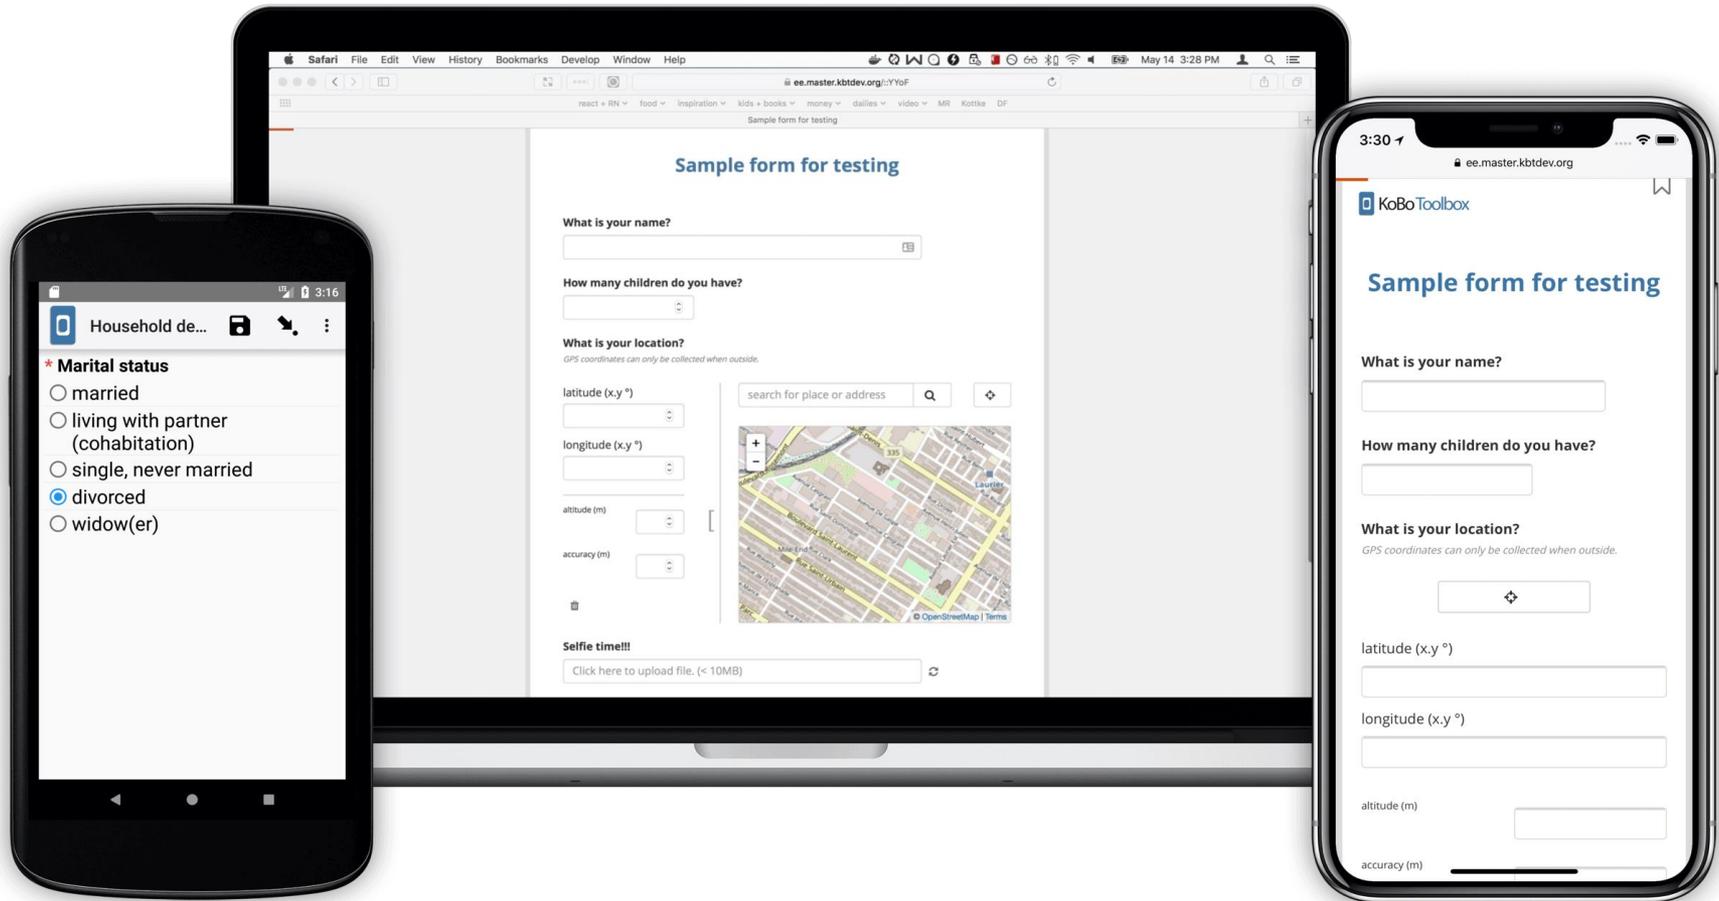

# Case study: Nepal COVID-19 monitoring

- Mobile-based rapid survey & messaging system building on the sanitation campaign
- Covered 56,951 households across 16 districts since May
- Conducted by over 1000 community volunteers
- Collects data on prevention awareness, symptoms, hygiene behaviour
- Data feeds back into strategies by local governments for more targeted outreach efforts
- Important for mental health support for vulnerable groups

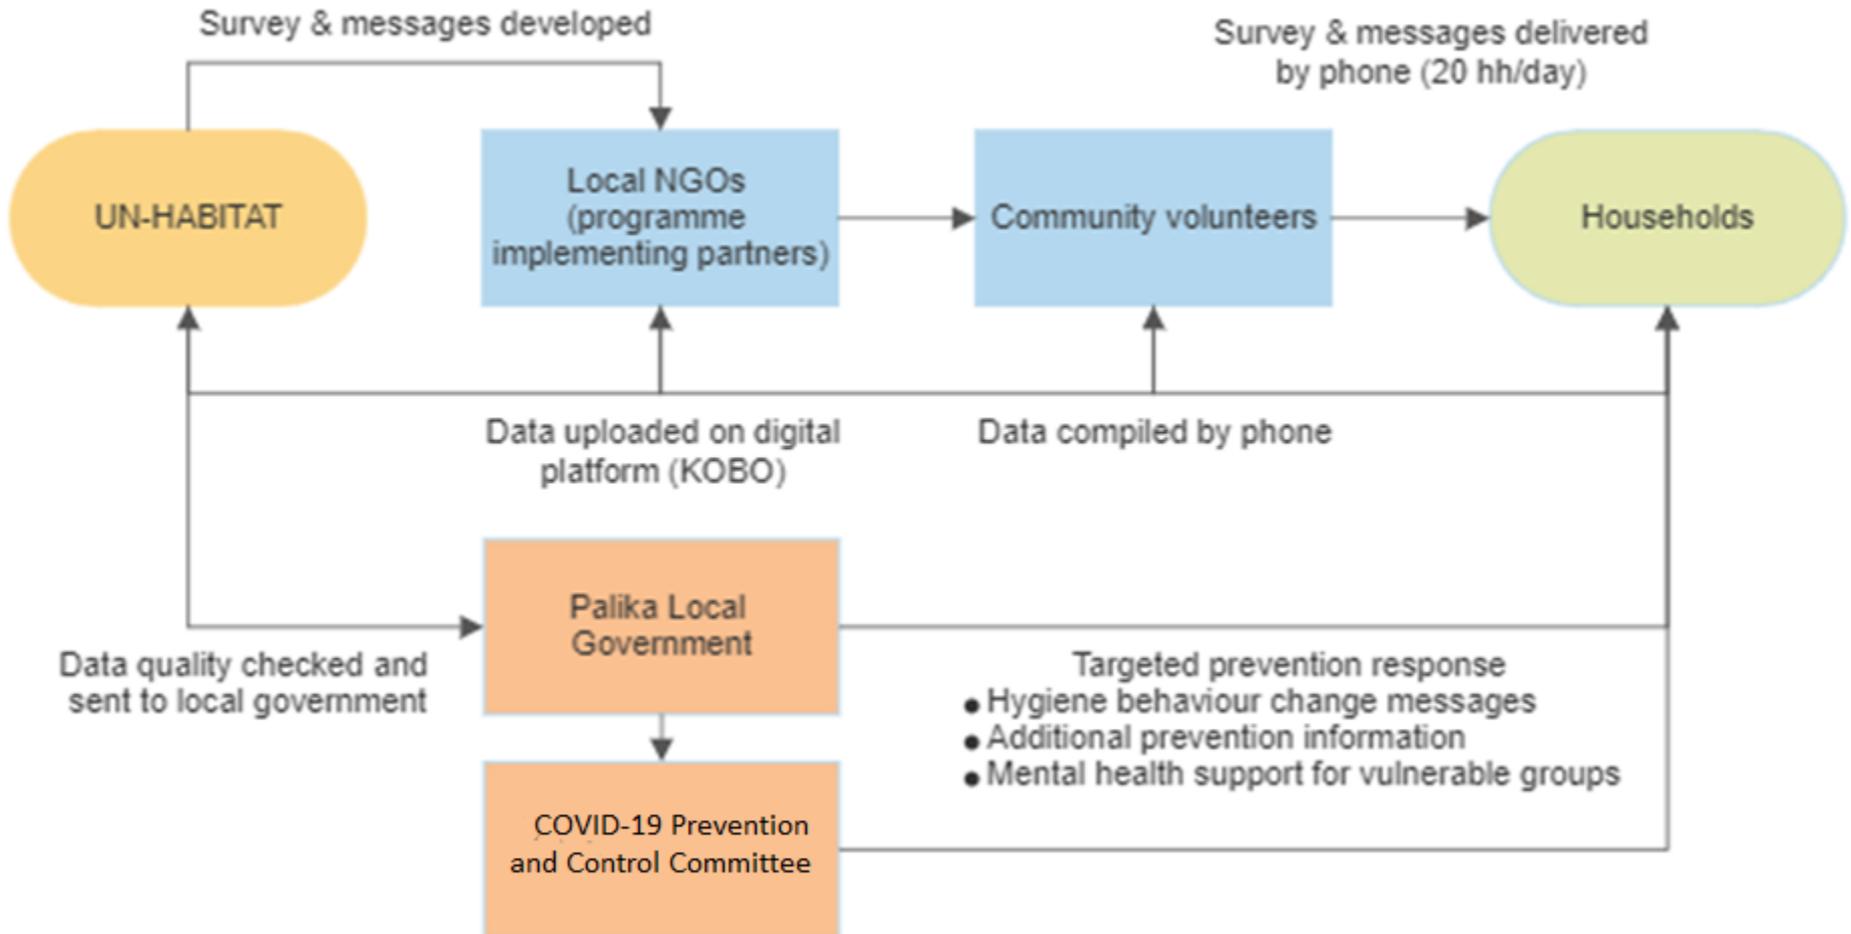

# Kobo Toolbox

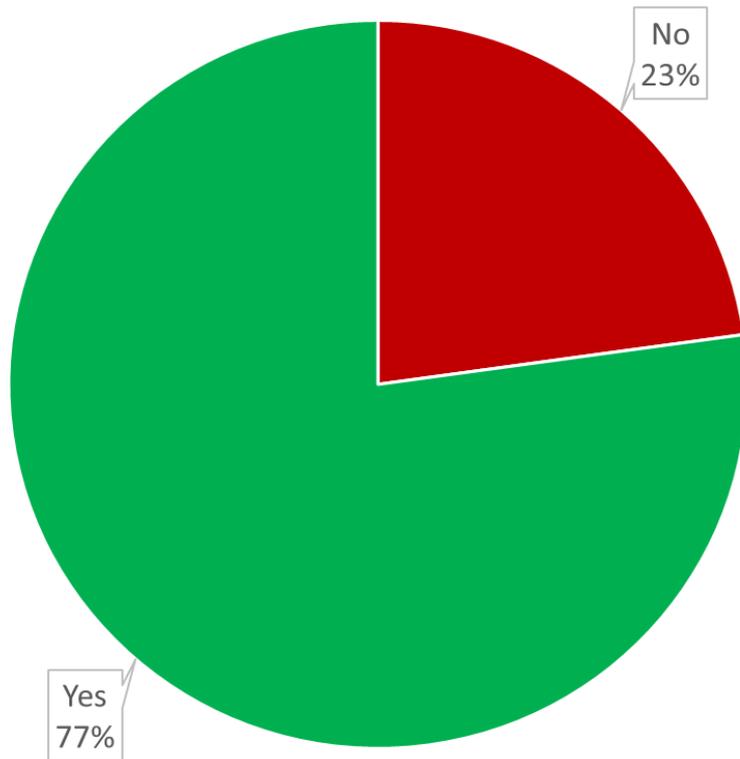

<https://www.kobotoolbox.org/>

# Case study: Nepal COVID-19 monitoring

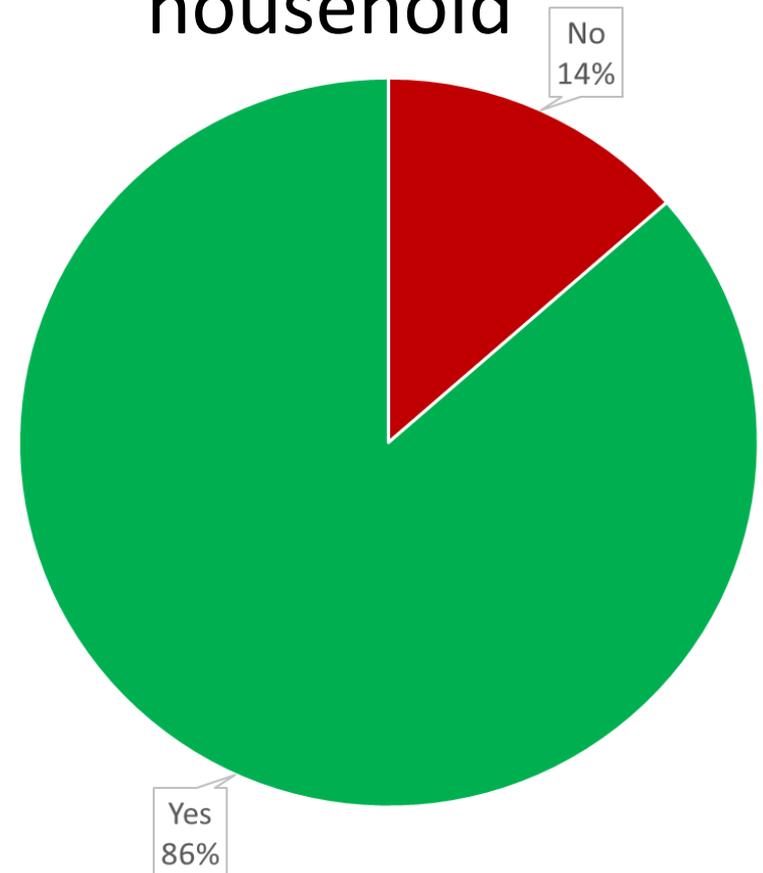

# Knowledge of prevention measures

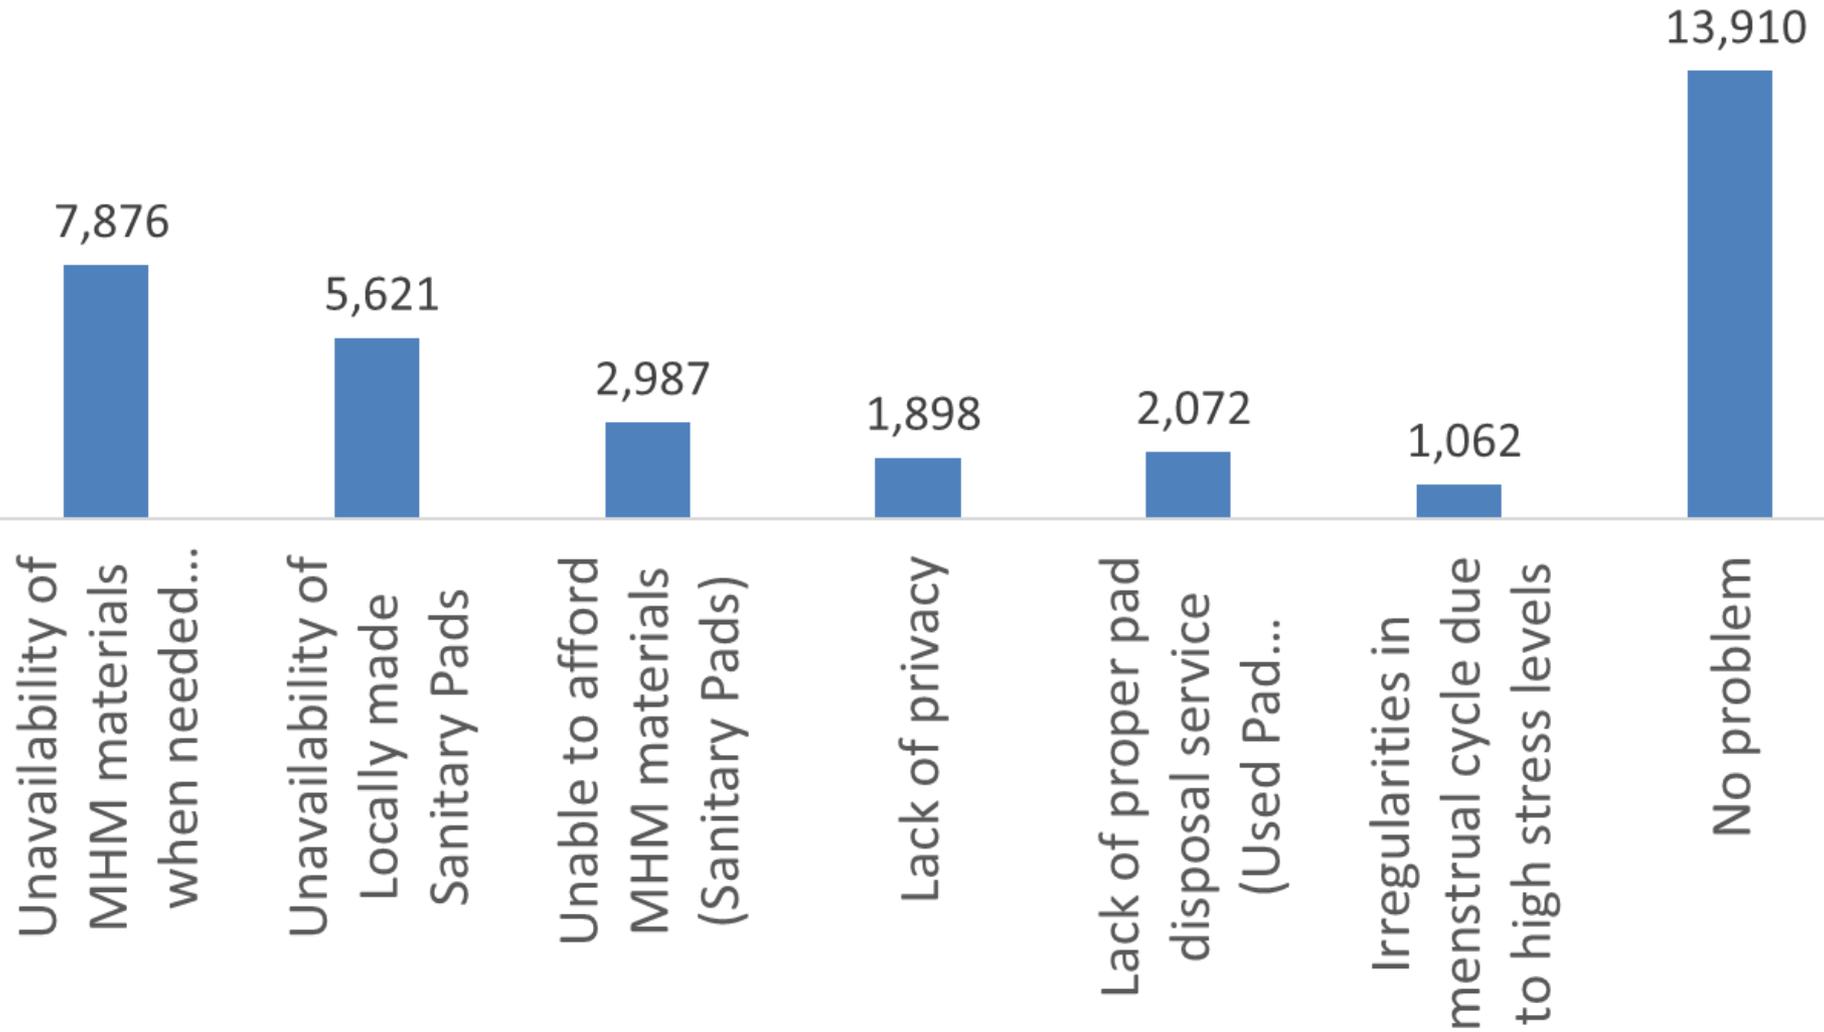

## Knowledge of COVID-19 transmission

## Availability of handwashing facilities in household

# Reported menstrual health & hygiene issues

# Reflections

- Vital that technology builds on existing systems, and aims to strengthen sustainability
- Do-no-harm principles: issues of confidentiality and the right to privacy, especially for vulnerable groups
- How do technologies exacerbate existing inequalities, or create new ones? How are communities involved?
- Simple, low-cost technologies are often the best suited

Thank you!  
謝謝
