COVID-19

ENFERMEDAD POR EL CORONAVIRUS 2019

CONÓCELO.

COVID-19 es una enfermedad respiratoria nueva que se identificó por primera vez en Wuhan, China. Actualmente, la propagación se da principalmente de persona a persona.

SÍNTOMAS*

- NECESIDAD DE RESPIRAR MÁS FRECUENTE
- FEBRE ALTA
- NEUMONÍA
- INSUFICIENCIA RESPIRATORIA AGUDA

SÍNTOMAS COMUNES

- MOJERES NASAL
- TOS
- DOLOR DE GARGANTA

CASOS GRAVES

*Los síntomas podrían aparecer de 1 a 12 días después de la exposición al virus.

¿Quiénes están en mayor riesgo de enfermarse gravemente?

- Adultos mayores de 60 años.
- Personas con enfermedades preexistentes como diabetes o cardiopatías.

¿Cómo se transmite?

- Por contacto personal cercano con una persona infectada.
- A través de personas infectadas al toser o estornudar.
- Al tocar objetos o superficies contaminadas y luego tocarse la boca, la nariz o los ojos.

Hasta el momento, no hay vacuna ni tratamiento específico, solo tratamiento de los síntomas. Los casos graves pueden necesitar oxígeno suplementario y ventilación mecánica.

PREPÁRATE.

- Infórmate a través de fuentes confiables.
- Lávate las manos frecuentemente con agua y jabón o usa un gel a base de alcohol.
- Cubrete la boca con el antebrazo cuando tosas o estornudes, o con un pañuelo desechable, luego tíralo a la basura y límpiate las manos.

ACTÚA.

- Evita el contacto cercano con personas que tengan síntomas de gripe.
- Evita tocarte los ojos, la nariz y la boca con las manos sin lavar.
- Evita compartir vasos, platos u otros artículos de uso personal y limpia y desinfecta los objetos y las superficies que se tocan con frecuencia.

Nota: Algunos datos pueden cambiar en la medida en que se tenga más conocimiento sobre la enfermedad. Febrero 2020.
